Abstract

In this report, we list the results we've achieved for classifying the subset of the CIFAR-10 dataset. We use the K-nearest neighbours and SVM to achieve an accuracy of X% and Y% respectively.

1 Introduction

- The problem statement
- The Cifar-10 dataset
- Our approaches

2 Exploratory data analysis

- How we intend to test our results
- Distribution of the various labels
- Color variance of the dataset
- Average image of each label class
- Average HOG in each label class

3 Classification with K-means and K-Nearest Neighbours

3.1 K-Means

- K-means on raw images
- K-means on filtered images (filter banks, gabor filters)
- K-means speed as the number of clusters increase

3.2 K-Nearest Neighbours

- Given the terrible training speed
- Using filtered images
- Classification speed
- Switching to HOG classifiers

Acknowledgments

Use unnumbered third level headings for the acknowledgments. All acknowledgments go at the end of the paper. Do not include acknowledgments in the anonymized submission, only in the final paper.

References

References follow the acknowledgments. Use unnumbered third level heading for the references. Any choice of citation style is acceptable as long as you are consistent. It is permissible to reduce the font size to ‘small’ (9-point) when listing the references. **Remember that this year you can use a ninth page as long as it contains *only* cited references.**
